

Manhattan ProActive

MANHATTAN ACTIVE® SUPPLY CHAIN

PREREQUISITES:

Experience working with Manhattan Active Supply Chain or Manhattan Active Omni products

Experience with software development, including:

- Using APIs to access data and interact with software components
- Working with JSONs
- Configuring UI extensions
- Deploying and testing extensions

MODE:

Self-paced e-learning

COURSE LOCATIONS:

Online

DURATION:

1 hour+

HOW TO REGISTER:

Contact learning@manh.com

Manhattan Active® has been built from the ground up to enable extensions to the base product. In fact, all layers of the system architecture are extensible – the database, the underlying business logic and the user interface. In the past, you had to rely solely on the Manhattan Services Team to build and maintain these extensions. Now, you can choose to take ownership yourself with Manhattan ProActive, in addition to leveraging Manhattan's experts! Manhattan ProActive is a development application within your Manhattan Active Platform. It provides all the information and tools you need to manage your own extensions to the base product, such as user exits, events, entities and user interface modifications. Manhattan ProActive provides a one-stop shop to keep track of your solution modifications throughout their lifecycle, even when your Manhattan solution is updated. In this course, you will learn:

- The benefits of Manhattan Active extensibility
- How to use the Developer Documentation published for APIs and Extension Points
- How to build and deploy extensions using Extension Packs

In addition to the presentation and videos, there will also be hands-on practice available. Practice activities are:

- Log In and Launch ProActive
- Explore APIs
- Explore Extension Points
- Explore Extension Packs
- Use Case
- Configurations
- Discovery Mode
