

# Slotting Optimization

Slotting Optimization is just one of a comprehensive series of hands-on training courses offered through Manhattan Training and Change Management Services. The combination of expert Training Consultants and engaging, multi-media courseware will provide the shortest distance between solution and adoption to deliver a return on your investment sooner.

## MANHATTAN ACTIVE™ SUPPLY CHAIN

### PREREQUISITES:

There are no prerequisites for this course

### MODE:

Instructor-led  
(classroom and live online)

### AUDIENCE:

- Project Managers
- Industrial Engineers
- System Implementation Specialists
- 3PL Consultants
- Operations Managers/ Supervisors
- Operational Financial Analysts

### COURSE LOCATIONS:

- Atlanta, GA Learning Center
- Berkshire, UK Learning Center
- On-site at your facility

### OVERVIEW

This course consists of several modules used to introduce participants to Slotting Optimization. The first part of the course covers configuration of the system and data requirements. The second section involves a discussion of slotting rules, functions and reports. Through this hands-on course, participants will build a Slotting Optimization warehouse complete with rack types, slots and items. As the course progresses, participants will add slotting rules to improve item location assignment and will process reslots within their warehouse to see the effects of the rules they configure. Analysis of the results will be reviewed.

#### Slotting Optimization Overview

The Slotting Optimization Overview defines, at a high level, Slotting Optimization, how it works and the benefits it can provide.

#### Installation and User Administration

Learn how to create users and profile types in order to access Slotting Optimization. Study how to create a Slotting Optimization warehouse and configure a user login in order to access the warehouse during hands-on activities.

#### Warehouse Creation

Explore rack types and their purpose. Understand pallet and bin types which may be used within active slots are also reviewed and configured.

#### File Imports

Learn about the 14 import types used by Slotting Optimization to pass slot and item data from a WMS into Slotting Optimization virtual warehouse.

#### Additional File Imports

Study import types used by Slotting Optimization to pass slot and item data from a WMS into the Slotting Optimization virtual warehouse. Practice creating slotting preferences for the warehouse.

#### Slotting Rules

Strengthen your expertise in constraints, goals and sequencing goals. Study how rules are used to identify restrictions and requirements for the placement of items. Practice item scoring based on constraints and goals during hands-on activities.

#### Slotting Functions and Reports

Learn what slotting tools are and how they are used to make updates to slot information. Understand slotting preferences which are used to identify how slotting will work in the warehouse. Learn about Haves/Needs analysis and the benefits it can provide. Finish up with tasks within Slotting Optimization which may be automated. Run reports generated by Slotting Optimization and learn how to get the most out of them.
